**Standard value:**

Bearing division	Bearing lubrication	Rotation torque
New	None (With anti-rust agent)	0.5 - 0.7 Nm
New or reusing	Gear oil applied	0.3 - 0.4 Nm

NOTE

The special tool cannot be turned a full revolution, so turn it several times within the range of movement to run in the bearing, and then measure the rotation torque.

4. Clean the side bearing hub.

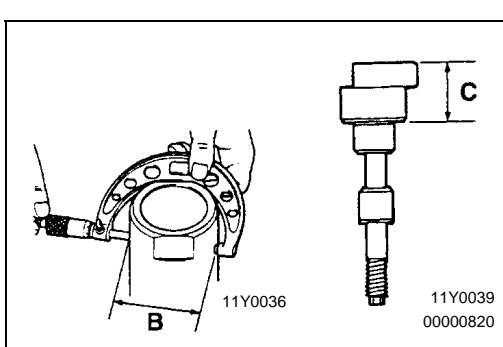

5. Install the special tools to the side bearing hub of the gear carrier, and then install the bearing cap.

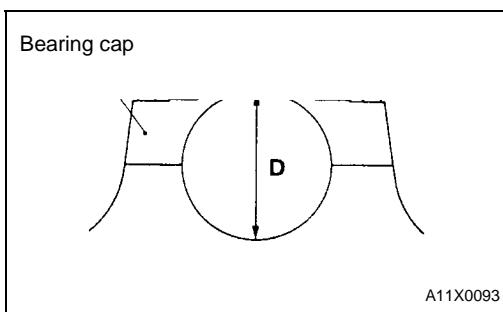

NOTE

Always check that the notch is in the shown position and that the special tools are touching firmly against the side bearing hub.

6. Use a thickness gauge to measure the clearance (A) between the special tools.

**<Correct>**

7. Remove the special tools (MB991170, MB990904)
8. Use a micrometer to measure the special tool in the places (B,C) shown in the illustration

<Incorrect>

9. Install the bearing cap, and then use a cylinder gauge and micrometer to measure the inside diameter (D) of the bearing cap as shown in the illustration
10. Calculate the thickness (E) of the required drive pinion front shim by the following formula, and then select a shim which most closely matches this thickness.

$$E = A + B + C - 1/2D - 91.0$$
